- Create a customer experience online that improved brand recognition
- Update and modify page as needed

PROJECTS

BootCampBox

Primary Contributor

[Github](#) /BootcampBox/BootCampBox

Live <http://nubootcampbox.xyz>

- Summary: A helpful dashboard for use in a web-development environment. It integrates multiple links, sites, and tools frequently used within a web-development lifestyle.
- Primary Language: Javascript
- Other Languages: HTML/CSS
- Tools Utilized: Firebase Auth & Firestore to create a full user experience without server access.

Additional Responsibility:

Managed and facilitated team meetings and communication

TrashParty

Primary Contributor

[Github](#) Q-GAP/TrashParty

Live <http://trashparty.xyz>

- Summary: NFT-style Webapp (for entertainment purposes): A website where once a day you open a pack of random stuff (data we collect from different API's – currently GIF's). Users can then trade each other or discard/pickup different Trash from the Landfill.
- Primary Language: Javascript - to create a dynamic end-user experience, make API calls, routing, and manage the authentication
- Other Languages Used: HTML, CSS
- This project leveraged HandlebarsJS, express-session, MySQL, Sequelize, bcrypt, and various other libraries/frameworks

Vicebrary

Primary Contributor

[Github](#) /Max-Effort/vicebrary

Live <https://vicebrary.herokuapp.com>

- Summary: A web application that allows the end-user to store, contribute to and annotate items in a library of vices.
- Primary Language: Javascript
- This project leverages React (front-end), Nodejs (back-end), GraphQL (API), and MongoDB for the database design.

Additional Responsibility:

Managed and facilitated team meetings, communication, as well as kept the team on schedule.
